“Making Sensors Wireless™”

For Immediate Release March 17, 2008 – Oceana Sensor Module LLC (OSM) announces a new website www.oceanasensormodule.com. OSM has expanded its’ Internet presence as acceptance of the Wireless Sensor Module (WSeM™) grows. Market reaction to the product announcement in October has been overwhelmingly positive and the company is prepared to reach its’ growth curve. The company also owns the domain names wifi-sensors.com and wifisensormodule.com. Informational needs of our prospects and customer should be met by the new website.

About Oceana Sensor Module LLC

Located in Virginia Beach, VA Oceana Sensor Module LLC (OSM) has designed an integrated component with multi-layered embedded programming tools that will revolutionize wireless sensing. The key element of OSM’s solution is a hardware device called a *Wireless Sensor Module* or a WSeM™ that is approximately the same size as two (2) pennies end to end. The design of the WSeM™ is the result of years of market investigation, consultation and development. This technology leverages existing OEM infrastructure and allows them to easily convert their wired product lines to a wireless offering. WSeM™ expands our market focus not only industrial but also to building automation, medical applications and process monitoring. The Company’s products are the Wireless Single Point Vibration sensor, Wireless Single Point Sensing Node, and several other Wireless Single Point Sensor designs.
